Descriptions

Brief descriptions of the journal for librarians and prospective authors and readers. These are made available in the site's sidebar when the Information block has been added.

For Readers

✎ 📄 **B** *I* U 🔗 🔗 🔗 <> 🔗 🔗 📷 Upload 📎

We encourage readers to sign up for the publishing notification service for this journal. Use the [Register](#) link at the top of the home page for the journal. This registration will result in the reader receiving the Table of Contents by email for each new issue of the journal. This list also allows the journal to claim a certain level of support or readership. See the journal's [Privacy Statement](#), which assures readers that their name and email address will not be used for other purposes.

Powered by TinyMCE

For Authors

✎ 📄 **B** *I* U 🔗 🔗 🔗 <> 🔗 🔗 📷 Upload 📎

Interested in submitting to this journal? We recommend that you review the [About the Journal](#) page for the journal's section policies, as well as the [Author Guidelines](#). Authors need to [register](#) with the journal prior to submitting or, if already registered, can simply [log in](#) and begin the five-step process.

Powered by TinyMCE

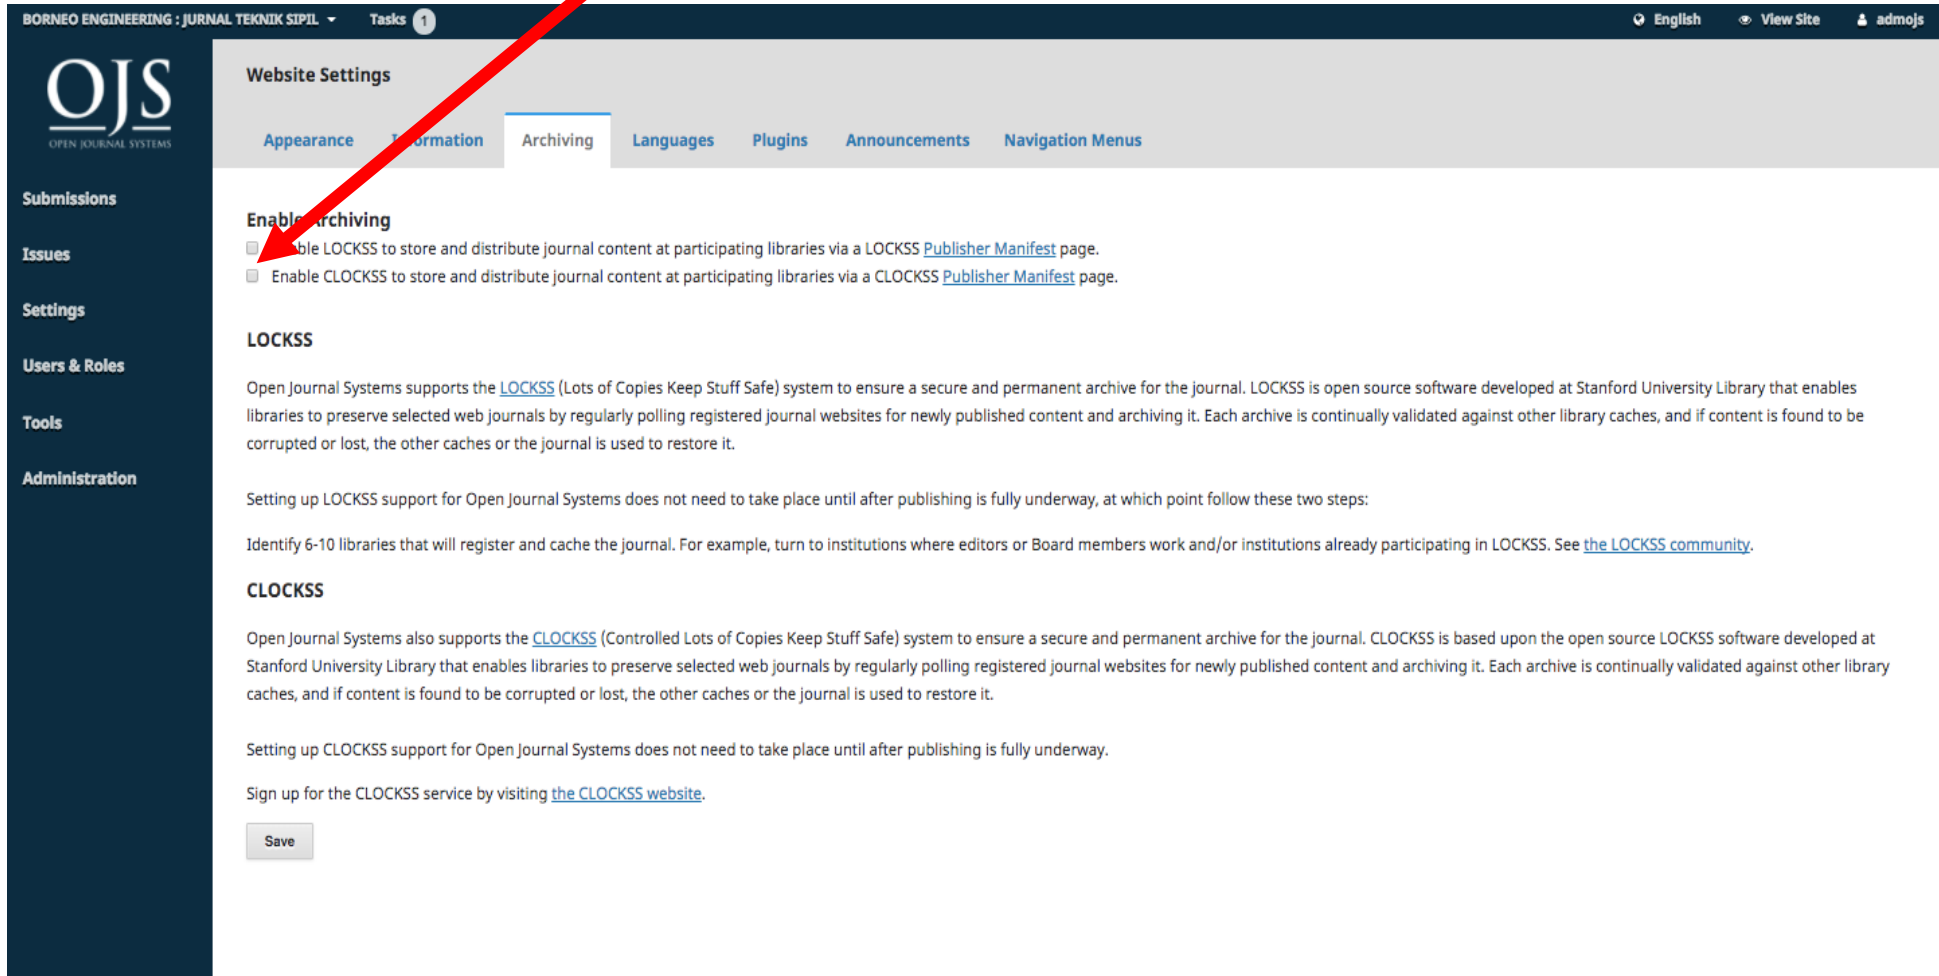

For Librarians

✎ 📄 **B** *I* U 🔗 🔗 🔗 <> 🔗 🔗 📷 Upload 📎

We encourage research librarians to list this journal among their library's electronic journal holdings. As well it may be worth noting that this journal's open source publishing system is suitable for libraries to host for their faculty members to use with journals they are involved in editing (see [Open Journal Systems](#)).

Enable Archiving

- ☐ Enable LOCKSS to store and distribute journal content at participating libraries via a LOCKSS [Publisher Manifest](#) page.
- ☐ Enable CLOCKSS to store and distribute journal content at participating libraries via a CLOCKSS [Publisher Manifest](#) page.

LOCKSS

Open Journal Systems supports the [LOCKSS](#) (Lots of Copies Keep Stuff Safe) system to ensure a secure and permanent archive for the journal. LOCKSS is open source software developed at Stanford University Library that enables libraries to preserve selected web journals by regularly polling registered journal websites for newly published content and archiving it. Each archive is continually validated against other library caches, and if content is found to be corrupted or lost, the other caches or the journal is used to restore it.

Setting up LOCKSS support for Open Journal Systems does not need to take place until after publishing is fully underway, at which point follow these two steps:

Identify 6-10 libraries that will register and cache the journal. For example, turn to institutions where editors or Board members work and/or institutions already participating in LOCKSS. See [the LOCKSS community](#).

CLOCKSS

Open Journal Systems also supports the [CLOCKSS](#) (Controlled Lots of Copies Keep Stuff Safe) system to ensure a secure and permanent archive for the journal. CLOCKSS is based upon the open source LOCKSS software developed at Stanford University Library that enables libraries to preserve selected web journals by regularly polling registered journal websites for newly published content and archiving it. Each archive is continually validated against other library caches, and if content is found to be corrupted or lost, the other caches or the journal is used to restore it.

Setting up CLOCKSS support for Open Journal Systems does not need to take place until after publishing is fully underway.

Sign up for the CLOCKSS service by visiting [the CLOCKSS website](#).

BORNEO ENGINEERING : JURNAL TEKNIK SIPIL

Tasks 1

ParaCite Citation Extractor

Extracts fields from plain text citations via the ParaCite service.

☒

Gateway Plugins (1)

Resolver Plugin

This plugin resolves issues and articles based on citation information.

☒

Generic Plugins (18)

Usage Statistics

Present data objects usage statistics. Can use server access log files to extract statistics.

☒

eLife Lens Article Viewer

This plugin provides rendering support for JATS XML galleys using eLife Lens.

☒

TinyMCE Plugin

This plugin enables WYSIWYG editing of textareas using the [TinyMCE](#) content editor.

☒

PDF.js PDF Viewer

This plugin uses the [pdf.js PDF viewer](#) to embed PDFs on the article and issue galley view pages.

☒

Dublin Core Indexing Plugin

This plugin embeds Dublin Core meta tags in article views for indexing purposes.

☒

Usage event

Creates a hook that provides usage event in a defined format.

☒

Web Feed Plugin

This plugin produces RSS/Atom web syndication feeds for the current issue.

☒

HTML Article Galley

This plugin provides rendering support for HTML Article Galleys.

☒

Google Scholar Indexing Plugin

This plugin enables indexing of published content in Google Scholar.

☒

Acron Plugin

This plugin attempts to reduce the dependance of the application on periodic scheduling tools such as 'cron.'

☒

Recommend Articles by Author

This plugin inserts a list of articles by the same author on the article abstract page.

☐

Citation Style Language

Allow readers to get a published article's citation in one of several formats supported by the Citation Style Language.

☐

Static Pages Plugin

This plugin allows Static Content Management.

☒

Google Analytics Plugin

Integrate OJS with Google Analytics, Google's web site traffic analysis application. Requires that you have already setup a Google Analytics account. Please see the [Google Analytics site](#) for more information.

☐

OpenAIRE

The OpenAIRE plugin adds the ProjectID element to the article metadata and extends the OAI-PMH interface according to the OpenAIRE

☐

Notification

The plugin "Static Pages Plugin" has been enabled.

The screenshot shows the OJS (Open Journal Systems) administration interface. The browser address bar indicates the URL: `https://ojs.borneo.ac.id/ojs/index.php/JTS/management/settings/website?uid=5a14ddb9c80#staticPages`. The page title is "BORNEO ENGINEERING : JURNAL TEKNIK SIPIL". The left sidebar contains navigation links: Submissions, Issues, Settings, Users & Roles, Tools, and Administration. The main content area is titled "Website Settings" and has several tabs: Appearance (selected), Information, Archiving, Languages, Plugins, Announcements, Navigation Menus, and Static Pages. A "Help" button is visible in the top right of the settings area. The "Appearance" tab is active, showing sections for "Logo" (with an "Upload" button), "Page Footer" (with a rich text editor and an "Upload" button), "Theme" (with a dropdown menu currently set to "Default Theme"), "Typography" (with a list of font options), and "Colour" (with a color picker and a note to "Choose a colour for the header").
